

I am

Industrial
supervisor

I'm trying to

check any gas leakage from
the gas containers and to
avoid any explosions because
of them.

But

there are many gas
containers and other
fluid containers which
can start ignition,

Because

it wasn't a easy task
to check all the gas
containers all time,

Which makes me feel

stressed and anxious
about what if the leakage
takes place and causes
plenty of life losses.
